RESUMO

Baetidae (Insecta: Ephemeroptera) do Estado de Rondônia, Norte do Brasil. Uma lista preliminar das espécies de Baetidae para o estado de Rondônia é apresentada tendo como base estudos da literatura, adultos e ninhas recém coletados em 20 localidades. Previously, apenas dez espécies de Baetidae pertencentes a cinco gêneros eram registradas para o estado. Incluindo os novos registros, o estado passa a conter 27 espécies de Baetidae pertencentes a 16 gêneros: *Americabaetis*, *Apobaetus*, *Aturbina*, *Baetodes*, *Callibaetis*, *Camelobaetidius*, *Chane*, *Cloeodes*, *Corinnella*, *Cryptonympha*, *Guajirolus*, *Harpagobaetus*, *Paracloeodes*, *Rivudiva*, *Spiritiops* e *Waltzoyphius*. Dois morfótipos não puderam ser identificados e duas espécies foram consideradas novas.

PALAVRAS-CHAVE: Neotropical; Inseto aquático; América do Sul.

ABSTRACT

Baetidae (Insecta: Ephemeroptera) from the state of Rondônia, Northern Brazil. We present a preliminary list of small minnow mayflies (Ephemeroptera: Baetidae) from Rondônia State based on literature and adults & nymphs collected from 20 different sites in the state. Previously, only ten species from five genera were reported from the state. Including our new records, we now report 23 species from 16 genera, including *Americabaetis*, *Apobaetus*, *Aturbina*, *Baetodes*, *Callibaetis*, *Camelobaetidius*, *Chane*, *Cloeodes*, *Corinnella*, *Cryptonympha*, *Guajirolus*, *Harpagobaetus*, *Paracloeodes*, *Rivudiva*, *Spiritiops* and *Waltzoyphius*. Two morphotypes could not be assigned to named species, and two species are new to science.

KEYWORDS: Neotropics; Aquatic Insect; South America.

INTRODUCTION

Baetidae is considered to be the largest family of Ephemeroptera, in terms of number of species, and it includes about 100 genera worldwide. This family is represented by approximately 830 species, with the largest number of species being reported in the Neotropical region (Baber-James *et al.* 2008).

Brazil has about 100 species of Baetidae, most of which are recorded from the Southeast region (Salles *et al.* 2013). The North region of Brazil, represented by the states of Acre, Amapá, Amazonas, Pará, Rondônia, Roraima and Tocantins, is one of the lesser studied areas of the country regarding mayflies. The state of Roraima is more studied than the others, in

which Falcão *et al.* 2012 reported 26 species of Baetidae from 66 collection sites. The states of Amapá and Rondônia are much less studied in relation to the Ephemeroptera fauna in general, and these states are represented by only one and ten species of Baetidae, respectively.

This study aims to present new records and distributional notes for the family in the state of Rondônia, as well as a list of all known Baetidae species from Rondônia state.

MATERIALS AND METHODS

Collects were done between August and September 2012 in the state of Rondônia (Fig. 1). Data pertaining to each sample site are provided in Table 1.

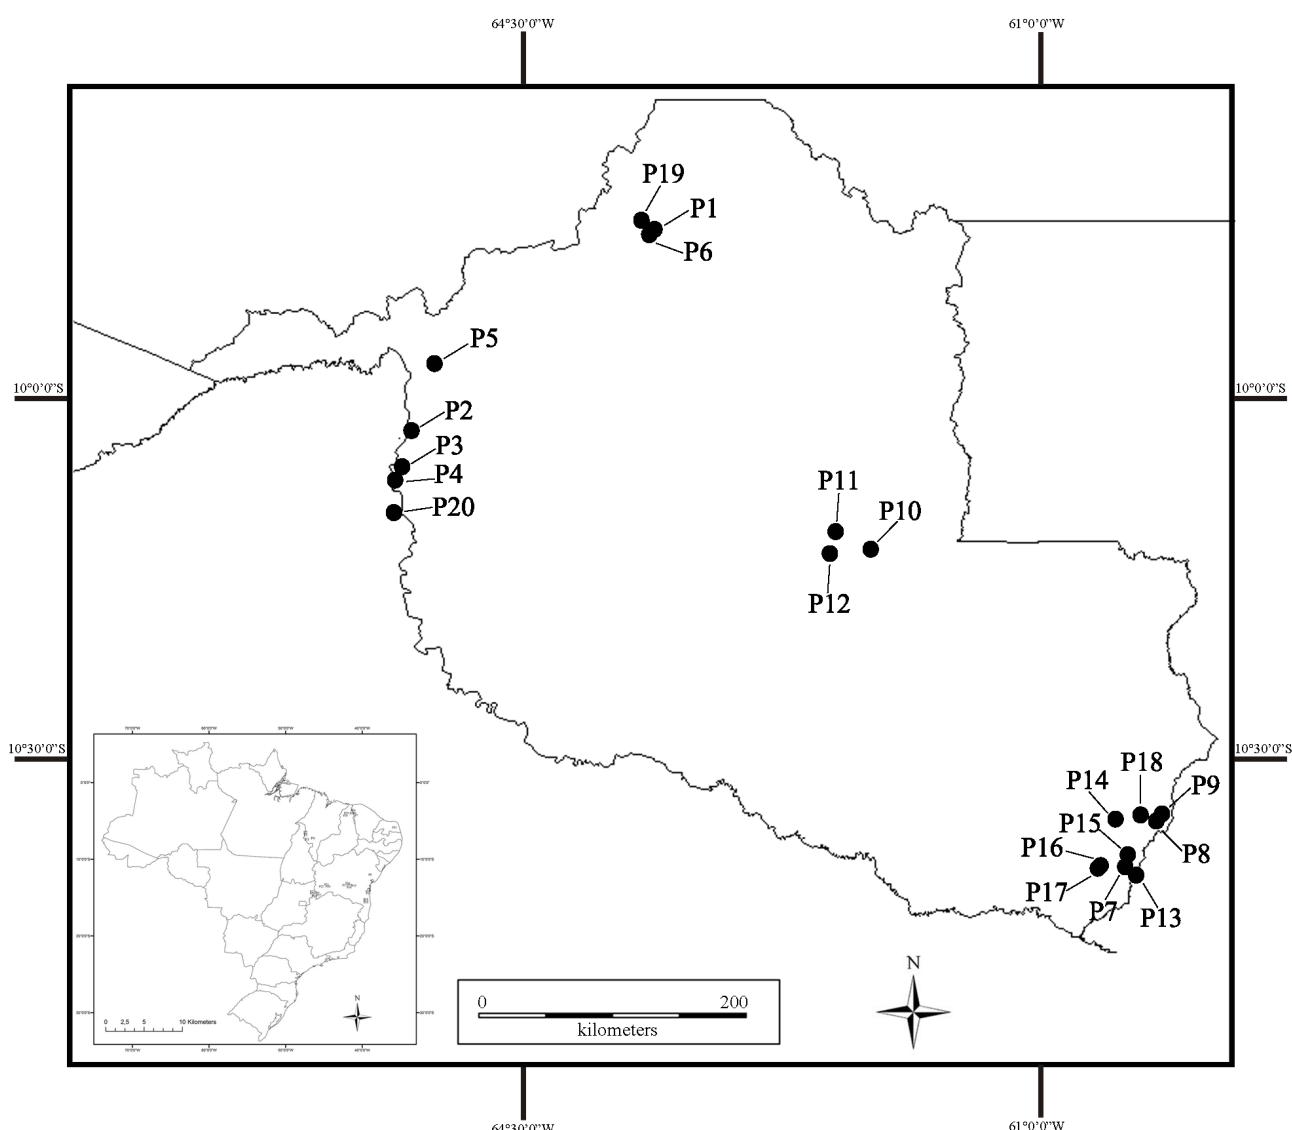

Figure 1. Sampling sites in Rondônia state where Baetidae (Insecta: Ephemeroptera) species were collected.

Nymphs were collected with an aquatic entomological net. The imagoes and subimagoes were captured with light traps and, in the case of subimagoes, reared to the imago stage. Collected specimens were fixed in 80% ethanol. Permanent slides, when needed, were made using Euparal® as the mounting medium. The

identifications were based on Salles & Serrão (2005), Domínguez *et al.* (2006), Emmerich & Nieto (2009) and other relevant papers for each taxon (*e.g.* Salles 2007; Salles & Francischetti 2004).

Examined specimens are deposited in the Zoological Collection of the Universidade

Federal de Roraima (UFRR), Boa Vista, Roraima and in the Invertebrate Collection of the Instituto Nacional de Pesquisas da Amazônia (INPA), Manaus, Amazonas, Brazil.

The symbol “P” refers to the collection site, listed in Table 2; “I” and “N” mean “imago” and “nymph”, respectively.

RESULTS AND DISCUSSION

Our study records 13 species and 11 genera for the first time from Rondônia, bringing the total for this state to 23 species and 16 genera, all listed in Table 2. One species of *Apobaetis* and one of *Cloeodes* are new to science, and the nymph of *Baetodes* was not possible to identify to the species level. The nymph of *Callibaetis* not identified could be either the undescribed nymph of a species known only in the adult stage or, alternatively, a new species.

Two species previously recorded from Bolivia, near Rondônia state, were recorded from the state of Rondônia: *Apobaetis kallawaya* Nieto, 2006 and *Chane baure* Nieto, 2003. *Apobaetis kallawaya* is recorded here for the first time from Brazil, but *C. baure* was previously recorded from state the state of Roraima (Salles 2007).

Figure 2. Baetidae nymphs, dorsal view. A. *Americabaetis alphus*; B. *Apobaetis fiuzai*; C. *Apobaetis* sp. nov. A; D. *Callibaetis* sp. A; E. *Camelobaetidius janae*; F. *Cloeodes auwe*.

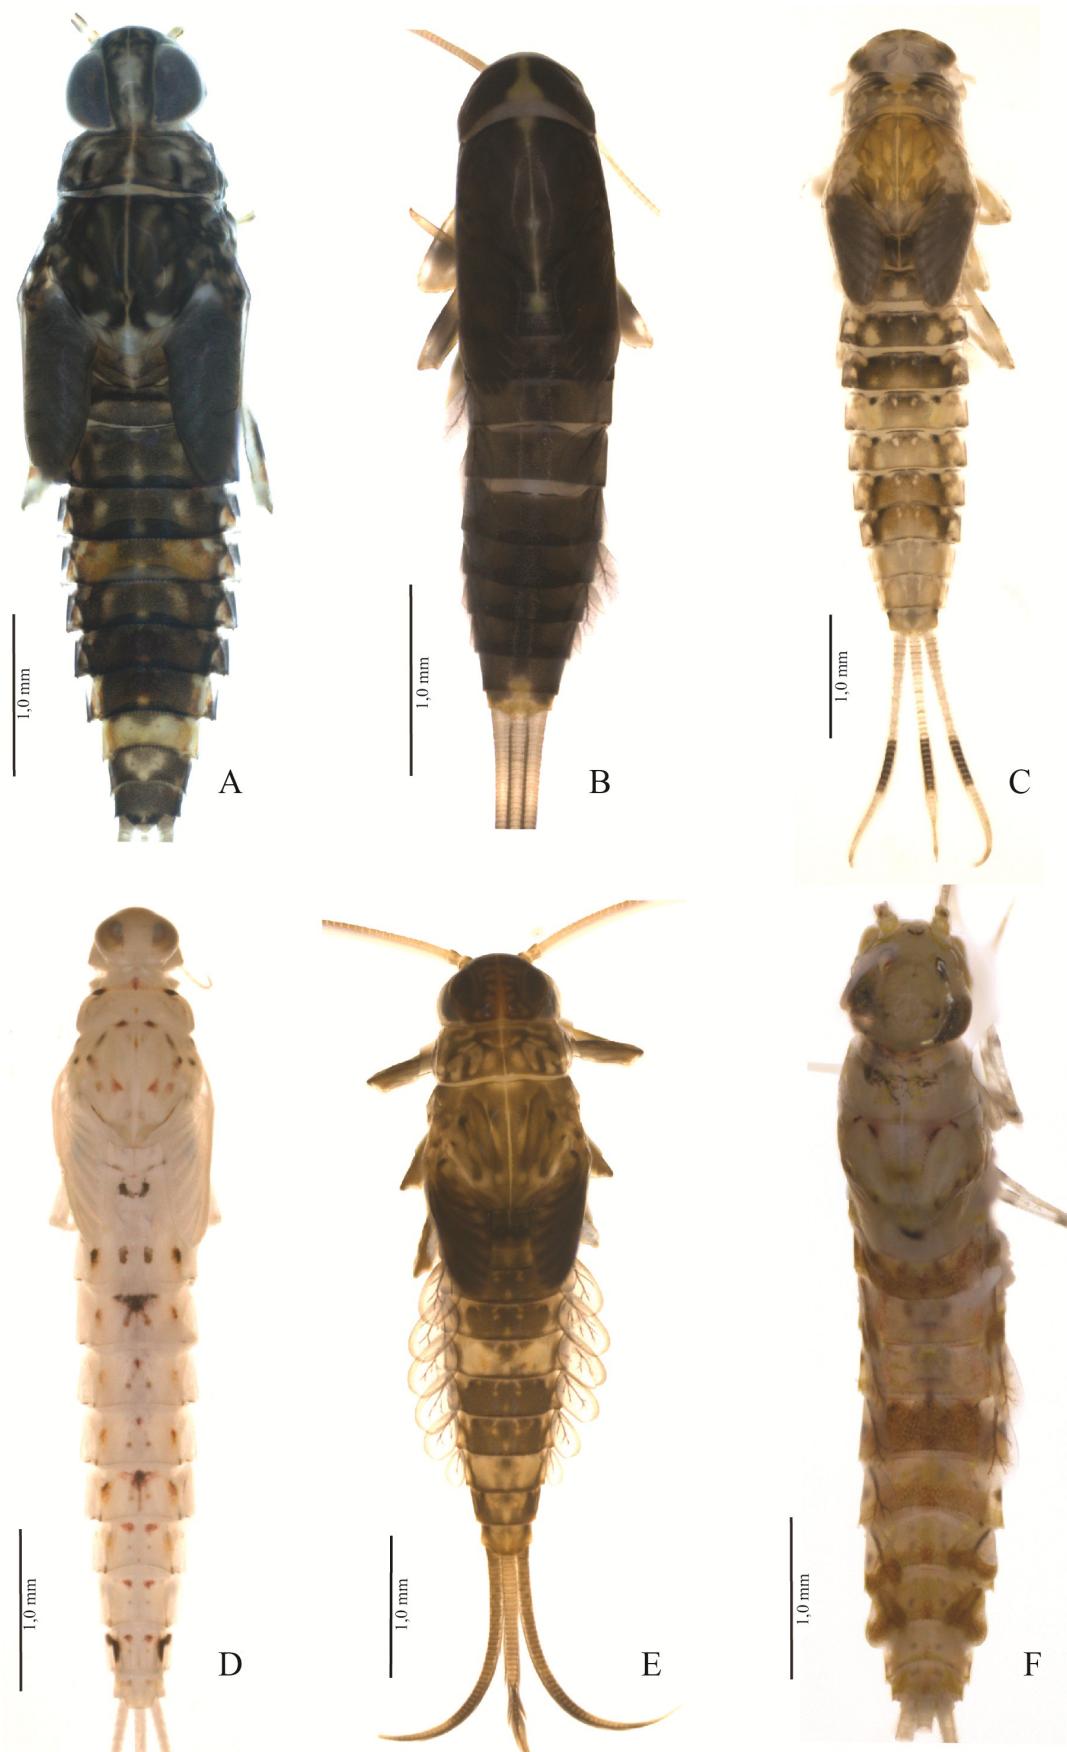

Figure 3. Baetidae nymphs, dorsal view. A. *Cloeodes* sp. nov. A; B. *Guajirolus rondoni*; C. *Harpagobaetis gulosus*; D. *Rivudiva trichobasis*; E. *Spiritiops silvudus*; F. *Waltzoyphius roberti*.

ACKNOWLEDGEMENTS

We would like to express our gratitude to FAPEAM (Fundação de Amparo à Pesquisa do Estado do Amazonas) for financial support, and CAPES (Coordenação de Aperfeiçoamento de Pessoal de Nível Superior) for financial support of the Pro-Equipamentos CAPES. The authors would like to thank Dr. Neusa Hamada (Instituto Nacional de Pesquisas da Amazônia) for logistic support. PVC is thankful for financial support provided by Conselho Nacional de Desenvolvimento Científico e Tecnológico (CNPq) – Protax processes number 562188/2010-0.
